Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Applicant's arguments with respect to claims 9 and 11-15 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 9 and 11-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Block et al (US 7,033,882).

Block et al disclose a structure of a decoupling capacitor(col. 1, lines 12-15) which is a structure with copper interconnects(col. 5, lines 7-12). The copper interconnects include a bottom electrode connected to a copper interconnect and a cladding of the same material on another interconnect(Fig. 17, layer 550, and col. 8, lines 20-29). The high k dielectric of the capacitor may be Ta₂O₅ or BST(col. 8, lines 50-54), which satisfies that it may be tantalum oxide or that it may comprise titanium oxide, as BST comprises an oxide of titanium. The electrode material may be Ru(col. 8, lines 40-50). The capacitor electrodes may be made from two or more materials and may include TaN(col. 7, lines 3-8 and 13-18).

Allowable Subject Matter

Claims 1 and 3-8 are allowed.
